SCAD
The University for Creative Careers

SAVANNAH COLLEGE OF ART AND DESIGN
FOUNDED 1978

# AI 201 Creative Computing with AI

## Section: A01 CRN: 33702

FORTY5 259

Monday / Wednesday 2:00 PM - 4:30 PM

**SCAD mission**
SCAD prepares talented students for creative professions through engaged teaching and learning in a positively oriented university environment.

**SCAD vision**
SCAD will be globally recognized as the preeminent source of knowledge in the disciplines we teach.

**SCAD values**

**Be Strategic.** Research and measure to guide work and document results.

**Be Innovative.** Generate new ideas and relevant solutions.

**Be Positive.** Approach all endeavors with enthusiasm.

**Be Collaborative.** Embrace and act upon our collective genius.

**Be Transformative.** Create life-changing experiences.

**Be Compassionate.** Treat everyone with kindness and care.

## Instructor Information

Professor: Tim Lindsey
Email: tlindsey@scad.edu
Phone: 404-253-5323
**Office Location**
FORTY5 156
Office Hours: TH 11 - 1

## Course Description

Students explore how to harness computing power for creativity, expression, and interactive design as they experiment with code, systems, and tools that bring intelligent behaviors to life. Prerequisite(s): AI 101.

## Student Learning Outcomes

1. Exciting content coming soon!

# Class Meeting Dates

1. Monday, March 23, 2026
2. Wednesday, March 25, 2026
3. Monday, March 30, 2026
4. Wednesday, April 1, 2026
5. Monday, April 6, 2026
6. Wednesday, April 8, 2026
7. Monday, April 13, 2026
8. Wednesday, April 15, 2026
9. Monday, April 20, 2026
10. Wednesday, April 22, 2026
11. Monday, April 27, 2026
12. Wednesday, April 29, 2026
13. Monday, May 4, 2026
14. Wednesday, May 6, 2026
15. Monday, May 11, 2026
16. Wednesday, May 13, 2026
17. Monday, May 18, 2026
18. Wednesday, May 20, 2026
19. Monday, May 25, 2026
20. Wednesday, May 27, 2026

## Pre-quarter Assignment

| Description |
| --- |
| Pre-Quarter Assignment<br><br>Log into a Chrome Browser with your SCAD email. This will unlock Gemini Pro for you. Navigate to Gemini and introduce yourself. Then give Gemini this syllabus and ask any questions that might come to mind. This is building context. Then ask Gemini to ask you questions about what skills you bring to the class: "Ask me about my skills and help me understand how they map to this course content." Conclude this session by asking Gemini to create a context doc for you that you can then save directly to Google Drive. Be prepared to describe this experience in Session 1.<br><br>Then repeat this exercise with Claude at claude.ai. Give Claude the same syllabus, ask the same questions, and compare the experience. Come to Session 1 ready to discuss: How did the two tools differ in their responses? Which felt more useful, and why? This comparison is your first act of editorial judgment.<br><br>Create a GitHub account using either your SCAD email or a personal email: https://github.com/ |

## Schedule of Classes

| Class | Date | Meeting Information |
|---|---|---|
| 1 | 3/23/26 | Session 1 \| Monday, March 23<br><br>Lecture: The Art Director's Engine. Why we use React to build interactive spaces instead of static canvases. Demo: Booting up the studio: Installing VS Code, managing the terminal, and surviving your first npm install. Apply: Students configure their local environments, install the Gemini extension, and launch their first blank canvas. |
| 2 | 3/25/26 | Session 2 \| Wednesday, March 25<br><br>Lecture: Blueprinting the Vibe (The "Soft" PRD). Why AI needs strict creative constraints. This document is your Design Intent. It is the standard against which you will evaluate everything Gemini produces for this project. Demo: Defining exact color palettes, typographic hierarchies, and hover-state rules before touching the code. Apply: Students write their creative spec (Design Intent) for the Hero Faction Screen, locking in their visual rules. ALIGNMENT: The Soft PRD is now formally named the Design Intent - the program's shared vocabulary for pre-AI creative specification. |
| 3 | 3/30/26 | Session 3 \| Monday, March 30<br><br>Lecture: Vibe Coding 101 - Directing the AI. Demo: Using Gemini to translate a creative spec into a structured, atmospheric CSS Grid layout. Apply: Headphones on. Students vibe-code their Hero Faction layouts, generating their structural frames. |

| Class | Date | Meeting Information |
|---|---|---|
| 4 | 4/1/26 | Session 4 \| Wednesday, April 1<br><br>Lecture: The Cloud Save. Using Git to protect your art from bad AI decisions. Demo: The add, commit, push rhythm, and watching your prototype go live on the web. Apply: Students push their Hero Screens to GitHub and verify their live, public URLs. FIRST PLAYABLE (P1): This is your first working version. The Hero Screen should be live and navigable, even if unpolished. Named checkpoint for your Design Cycle. |
| 5 | 4/6/26 | Session 5 \| Monday, April 6<br><br>Lecture: The Director’s Cut (Fixing Hallucinations). Demo: Intentionally asking the AI to ruin the layout, then using Git to revert back to your original masterpiece. Apply: Students stress-test their designs, refine their atmospheric hover states, and polish the final visuals. STUDIO CHECK-IN BEGINS: Starting today, each session opens with a 5-minute small-group check: “What did I make? What am I making? Where am I stuck?” |
| 6 | 4/8/26 | Session 6 \| Wednesday, April 8<br><br>Lecture: The Studio Crit. How to discuss interactive flow rather than just static beauty. Demo: Peer crit prompt: “Does the submitted work match the student’s original Design Intent? Where did it drift, and was that drift deliberate?”<br><br>Apply: Live desk demos. Students present their Hero Screens and explain how they directed the AI to achieve their vibe. |

| Class | Date | Meeting Information |
|---|---|---|
| 7 | 4/13/26 | Session 7 \| Monday, April 13<br><br>Lecture: Tactile UI & Diegetic Design. Designing interfaces that feel like physical objects. Demo: Translating a fun mechanic (like a trading card deck) into a set of plain-English logic rules. Apply: Students write the logic constraints for their three Diegetic UI toys. |
| 8 | 4/15/26 | Session 8 \| Wednesday, April 15<br><br>Lecture: Forging the Toys (Prefabs & Props). Demo: Prompting AI to build an isolated, reusable UI card that changes its look based on its “stats.” Apply: Students use AI to generate the visual frameworks (Prefabs) for their three mechanics. |
| 9 | 4/20/26 | Session 9 \| Monday, April 20<br><br>Lecture: Breathing Life into UI. Making the toys actually react to the player. Demo: Wiring up a button to change a component’s underlying state (e.g., clicking the card flips it over). Apply: Students prompt Gemini to add click-events and state changes, making their prototypes playable. FIRST PLAYABLE (P2): At least one of your three toys should be clickable and responding to state changes. Named checkpoint for your Design Cycle. |
| 10 | 4/22/26 | Session 10 \| Wednesday, April 22<br><br>Lecture: Faking the Lore. Demo: Having AI rapidly generate JSON arrays of fake items, stats, or dialogue to make the UI look populated and real. Apply: Students inject AI-written dummy data into their toys to simulate a rich game world. |

| Class | Date | Meeting Information |
|---|---|---|
| 11 | 4/27/26 | Session 11 \| Monday, April 27<br><br>Lecture: The "Juice." Demo: Tying animations, screen shakes, and color flashes directly to the player's clicks. Apply: Students add micro-interactions and visual juice to their toys to make them feel incredible to click. |
| 12 | 4/29/26 | Session 12 \| Wednesday, April 29<br><br>Lecture: Pitching the System. Demo: Studio Crit format: presenting working systems, not just screens. Apply: Desk presentations. Students show off their 3 working mechanics. The class critiques which toy is the most fun to interact with.<br><br>STUDIO CRIT (P2): Crit prompt: "Show me one moment where you rejected what Gemini gave you and explain why." |
| 13 | 5/4/26 | Session 13 \| Monday, May 4<br><br>Lecture: The Capstone Pitch & The Master Spec. This is your Design Intent for Project 3 - the comprehensive blueprint against which all AI output will be evaluated.<br><br>Demo: How to write an airtight blueprint for a complete, multi-layered interactive app. Apply: Students select their favorite toy from Project 2 and write the comprehensive Master PRD (Design Intent) for their Capstone Codex.<br><br>DESIGN INTENT (P3): The Master Spec is your formal Design Intent for the capstone. Same practice as Session 2, higher stakes. |

| Class | Date | Meeting Information |
|---|---|---|
| 14 | 5/6/26 | Session 14 \| Wednesday, May 6<br><br>Lecture: AI as Your Engineering Team. Demo: Feeding the Master Spec to Gemini to generate the baseline architecture in a brand new repository. Apply: Students boot up their Capstone repos and generate the foundational app structure. |
| 15 | 5/11/26 | Session 15 \| Monday, May 11<br><br>Lecture: The Infinite Scroll (Mapping Data). Demo: Making the UI build itself by feeding massive JSON datasets into your visual components. Apply: Students connect their Lore datasets to their layouts, automating the visual rendering of their app. |
| 16 | 5/13/26 | Session 16 \| Wednesday, May 13<br><br>Lecture: Deep Vibe Coding & Context Windows. Managing the AI so it doesn't "forget" what it's building during a long studio session.<br><br>Demo: Context window management strategies. The student holds the high-weight decisions (vision, architecture, creative rationale) while managing what AI handles session to session. Apply: Extended studio block. Deep, focused execution of Codex features. FIRST PLAYABLE (P3): Your Capstone should be navigable and data-connected, even if unpolished. Named checkpoint.<br><br>• PROCESS BLOG PROMPT: "What did you need to re-establish with AI at the start of this session, and what does that tell you about who is holding the project's creative memory?" |

| Class | Date | Meeting Information |
| --- | --- | --- |
| 17 | 5/18/26 | Session 17 \| Monday, May 18<br><br>Lecture: The Pocket Experience (Mobile-First). Demo: Having AI rewrite your CSS grids so the game UI looks flawless on a phone screen. Apply: Students implement responsive design, ensuring their Codex is a fully mobile-ready companion app. |
| 18 | 5/20/26 | Session 18 \| Wednesday, May 20<br><br>Lecture: Polishing the Artifact. Demo: Translating red console errors into plain English so the AI can squash the bugs. Apply: QA testing. Students hunt down visual glitches, broken states, and edge cases in their apps. |
| 19 | 5/27/26 | Session 19 \| Wednesday, May 27 (Shifted from Memorial Day)<br><br>Lecture: The Final Polish. Demo: Auditing your Git history to prove your process, and verifying the live URL. Git history doubles as AI use documentation: annotate commits with your reasoning, not just the action.<br><br>Apply: Students ensure their live pipelines are green, clean up their code, and prep for the premiere. |

| Class | Date | Meeting Information |
|---|---|---|
| 20 | 5/29/26 | Session 20 \| Friday, May 29 (Shifted for Holiday Accommodation)<br><br>Lecture: The Art Director's Post-Mortem. Demo: Studio Crit format: live demonstrations of the Capstone tool. Apply: The Final Boss. Live demonstrations of the Capstone tool. Students pitch their final interactive experiences to the class and defend their creative/technical process.<br><br>STUDIO CRIT (P3) + POST-MORTEM: Final Design Cycle completion. Post-Mortem is the program's standard term for post-project reflection - a transferable professional practice. |

# Grading Opportunities

| # | Due Date | Assignment | Weight |
|---|---|---|---|
| 20 | 4/8/26 | Project 1: The “Hero Faction” Screen (20%)<br><br>You are the Lead UI Designer for a new AAA game. Your first task is to design the “Hero Screen”-the interactive webpage where players choose their faction, class, or character before the game begins.<br><br>The Vibe: This is an interactive poster. It needs to drip with atmosphere. When a user hovers over a character, the layout should react, the typography should shift, and the unselected options should fade into the background.<br><br>Deliverables:<br><br>• A visually stunning, single-page interactive experience hosted live on the web.<br>• Design Intent (Soft PRD) documenting your creative spec before AI engagement.<br>• Mermaid diagram of your project flow: what receives input, how the system processes it, what it outputs.<br>• AI Direction Log: 3-5 entries documenting what you asked AI to do, what it produced, and what you changed, rejected, or kept, and why. (Can be in your README, annotated commits, or sketchbook.)<br>• Records of Resistance: 3 documented moments where you rejected or significantly revised AI output. Each answers: | |

| # | Due Date | Assignment | Weight |
|---|---|---|---|
| | | What did AI produce? Why did you reject or revise it? What did you do instead?<br>• Five Questions reflection (short paragraph in README or sketchbook before submission).<br><br>Design Goal: Masterful typography, CSS Grid layouts, and atmospheric hover states. Tech (Under the Hood): Prompting AI for CSS structure, setting up VS Code, pushing to GitHub. OPEN PROJECT: The game UI framing is our shared creative language. If you have a discipline-specific direction that maps to the same technical goals (an interactive portfolio system, a brand experience tool, a data visualization for your field), bring it to me in Week 1 and we will adapt the brief together. | |

| # | Due Date | Assignment | Weight |
|---|---|---|---|
| 30 | 4/29/26 | Project 2: The “Diegetic UI” Sandbox $(30 \%)$<br><br>Great Game UI doesn’t feel like a website; it feels like a physical object inside the game world (a “diegetic” interface). You are designing the tactile, clickable mechanics that players interact with.<br><br>The Vibe: You will design three distinct “toys” or widgets. You aren’t just drawing them—you are using AI to make them actually work.<br><br>Choose three:<br>• The Spellbook / Deck Builder: Cards that flip, highlight, and change stats when clicked.<br>• The Sci-Fi Inventory Terminal: A grid of items where clicking an object boots up a glowing data panel.<br>• The Visual Novel Dialogue Tree: A stylized text box that types out conversations and offers branching choices.<br><br>Deliverables:<br>• Three working, interactive UI mechanics hosted live.<br>• Design Intent for each toy.<br>• AI Direction Log: 3-5 entries per project.<br>• Records of Resistance: 3 documented moments.<br>• Five Questions reflection before submission. | |

| # | Due Date | Assignment | Weight |
|---|---|---|---|
| | | Design Goal: “Juice” and micro-interactions. How does it feel to click your buttons? Tech (Under the Hood): React Components (Prefabs), Props (Stats), and useState (Player Health). | |

| # | Due Date | Assignment | Weight |
|---|---|---|---|
| 40 | 5/29/26 | Project 3: The Lore Codex (Capstone) (40%)<br><br>For your final portfolio piece, you are building a complete “Companion App” or “Lore Codex.” You are taking your strongest design system and turning it into a fully playable, data-rich mini-app.<br><br>The Vibe: This is where you transition from Designer to Art Director. You will write a Master Spec Document (Design Intent) detailing exactly how your app should look and feel, and you will manage the AI (your engineering team) to build it for you.<br><br>Pipeline Options<br><br>Projects 1 and 2 use React as our shared classroom language. For the Capstone, you may choose one of three production pipelines based on your discipline and portfolio goals:<br><br>React App (Default): The continuation of your P1/P2 stack. Build a polished, mobile-responsive web app hosted live. Must look incredible on both a 4K monitor and an iPhone.<br><br>Unity: Build an interactive experience as a Unity project. Your Design Intent and AI Direction Log apply identically - the Art Director relationship with AI does not change because the engine does. Deliverable is a built application or WebGL export with a live URL. | |

| # | Due Date | Assignment | Weight |
|---|---|---|---|
| | | Unreal (Plugin): Build a plugin or interactive tool within Unreal Engine. Same documentation and ESF requirements apply. Deliverable is a packaged plugin or built experience with documentation. If you choose Unity or Unreal, discuss your plan with me during Session 13 when you write your Master Spec. Your Design Intent must account for the pipeline-specific deliverable format. The ESF practices (AI Direction Log, Records of Resistance, Five Questions) are identical across all three pipelines.<br><br>Example directions:<br><br>A Creature Bestiary: A searchable, filterable database of monsters with animated stat bars. (React)<br><br>A TTRPG Character Generator: A tool that rolls stats and builds a custom character sheet. (React or Unity)<br><br>A Tarot Card Reader: An app that draws random cards from a deck and displays their lore. (React)<br><br>An Interactive Environment Tool: A Unity scene with procedural generation driven by player input. (Unity)<br><br>A Custom Editor Plugin: An Unreal plugin that extends the editor with AI-assisted asset workflows. (Unreal)<br><br>Deliverables: | |

| # | Due Date | Assignment | Weight |
|---|---|---|---|
| | | A polished, mobile-responsive interactive tool driven by data, hosted live.<br><br>Master Spec / Design Intent.<br><br>Mermaid diagram of your full app architecture.<br><br>AI Direction Log: 3-5 entries.<br><br>Records of Resistance: 3 documented moments.<br><br>Five Questions reflection before submission.<br><br>Post-Mortem: A written reflection on your full Design Cycle for the capstone.<br><br>Design Goal: A flawless, shipped product that looks spectacular on mobile and desktop. Tech (Under the Hood): React: JSON data arrays into React components, mapping arrays, AI bug-squashing. Unity: Scene management, C# scripting with AI assistance, asset pipeline. Unreal: Plugin architecture, Blueprints and/or C++ with AI assistance, editor extension workflows. | |
| 10 | 5/29/26 | Presentation and Professionalism (10%)<br><br>Assessed across all three Studio Crits and your overall engagement with the Design Cycle process, Studio Check-Ins, and documentation practices. | |

## Grading Standards

| Letter Grade | Quality | Range | Undergraduate Quality Points | Graduate Quality Points |
|---|---|---|---|---|
| A | Excellent | 90 - 100% | 4 | 4 |
| B | Good | 80 - 89% | 3 | 3 |
| C | Satisfactory | 70 - 79% | 2 | 2 |
| D | Poor | 60 - 69% | 1 | 0 |
| F | Failing | 0 - 59% | 0 | 0 |

## Required Materials

1. Core Software (Local Installations)

This is the software they must physically download and install on their MacBooks or lab computers.

- **Visual Studio Code** (VS Code): The primary code editor. This is our "Game Engine" workspace.
- **Node.js**: The runtime environment. This is strictly required so you can run **npm install** and **npm run dev** in the terminal to see their local browser previews.
- **Git**: The underlying version control software. (Macs usually have this pre-installed via Xcode command line tools, but Windows users will need Git Bash).

2. Required VS Code Plugins (Extensions)

You only need one required extension to make the vibe-coding magic happen inside the editor.

- **Gemini Code Assist**: This is the Google extension they will install directly inside VS Code. It provides the inline chat, code generation, and error debugging right next to their files.

3. Required Accounts & Logins

You will need to create or log into two specific platforms to participate in the class.

- **GitHub Account**: This is the most critical login. You need this to fork class Sandbox repositories, track their Git history, and automatically host their live web apps using GitHub Pages.
- **Google Account**: You will need a Google account to log into the Gemini Code Assist plugin in VS Code, and to access the Gemini web interface (for feeding it their long-form PRD documents during the planning phases). Note: Since we are using local VS Code instead of IDX, you use your SCAD.edu Google accounts.

4. Headphones or earbuds.
5. A Dedicated Sketchbook (Dotted Grid highly recommended): You cannot build a system you haven't drawn. You will be required to physically wireframe your Game UI concepts, component trees, and state logic before writing your Product Requirements Documents (PRDs) or prompting the AI.

Do not store your project on an external drive. The portability problem is solved via GitHub and your external storage will break this.

**Savannah and SCADnow classes** - please visit https://www.bkstr.com/savannahstore/ and search for this course to view costs of associated texts and materials.

**Atlanta classes** - please visit https://www.bkstr.com/scadatlantastore/ and search for this course to view costs of associated texts and materials.

## Recommended Materials

Required Materials

1. Your Textbook: AI

There is no traditional textbook for this course. Your primary learning resources are your AI collaborators. Claude (claude.ai and Claude CLI) and Gemini (via your SCAD Google account) serve as reference, tutor, and production partner. You will learn to direct them, evaluate their output, and build with them - and that process is the curriculum.

2. Core Software (Local Installations)

- Visual Studio Code (VS Code): The primary code editor. This is our “Game Engine” workspace.
- Node.js: The runtime environment. Required so you can run npm install and npm run dev in the terminal.
- Git: The underlying version control software. (Macs usually have this pre-installed via Xcode command line tools; Windows users will need Git Bash).

3. AI Tools

- Claude CLI: The instructor’s primary production pipeline. Command-line AI tool for agentic coding workflows. Install instructions provided in Session 1. Also available via claude.ai for chat-based interaction.
- Gemini Code Assist: The Google extension installed inside VS Code. Provides inline chat, code generation, and error debugging right next to your files. Available through your SCAD Google account.

React, Node.js, Claude, and Gemini are the tools we use in class demonstrations and shared exercises. The ESF framework is tool-agnostic: the same practices apply regardless of which AI you use. If you have a strong reason to work with a different AI tool or creative computing environment, discuss it with me in the first week.

4. Required Accounts & Logins

- GitHub Account: Required for forking class Sandbox repositories, tracking Git history, and hosting live web apps via GitHub Pages.
- Google Account: Required for Gemini Code Assist plugin in VS Code and the Gemini web interface. Use your SCAD.edu Google account.

- Claude Account: Required for access to claude.ai and Claude CLI. Free tier is available; Pro accounts are recommended for extended usage.

5. Headphones or earbuds.

1. A Dedicated Sketchbook (Dotted Grid highly recommended): You cannot build a system you haven't drawn. You will be required to physically wireframe your Game UI concepts, component trees, and state logic before writing your Product Requirements Documents (PRDs) or prompting the AI.

Extension: Connect the physical wireframe to a Mermaid diagram in the GitHub repository. The sketchbook establishes visual and conceptual intent; the Mermaid diagram maps system logic in a version-controlled format. Students produce a physical artifact (sketch), a programmatic artifact (Mermaid), and a built system. Deliverable for each project: "Mermaid diagram of your project flow: what receives input, how the system processes it, what it outputs." Important: Do not store your project on an external drive. The portability problem is solved via GitHub; external storage will break this.

## Study (Field) Trips

| Study Trip | Date | Description |
|---|---|---|
| 1 | | TBD: Skill Shot Media visit hosted by Todd Harris. Data driven dynamic real time UI in action in an Esports venue. |

## Extra Help Sessions

| Extra Help Sessions | Date | Description |
|---|---|---|
| 1 | 4/26/26 | Virtual one on one help sessions. 45 minutes. Available to every student upon request. |
| 2 | 5/24/26 | Virtual one on one help sessions. 45 minutes. Available to every student upon request. |

## Extended Learning Opportunities

Extended learning opportunities are designed to enrich and expand students' course-based learning experiences. These university-wide extended learning opportunities (i.e., SCADamp workshops, SCADextra workshops, events and exhibitions, guided studio work, and virtual engagements) are offered both on-ground and virtually and allow students to further explore their discipline, discover new information, and deepen academic engagement.

Use the links below to view the schedule of upcoming events.

https://myevents.scad.edu/

https://app.scad.edu/workshops/

Information regarding extended learning opportunities specific to this course may also be communicated via Blackboard.

| **Suggested Extended Learning Opportunities** |

| |

## SCAD Libraries and Academic Resources

**SCAD Libraries**
Students at all SCAD locations can access SCAD Libraries' extensive collections, digital resources, and research assistance both in person and online. Explore SCAD Libraries here: Millennium Web Catalog (scad.edu).

**SCADextra Coaching: Academic Resources**
SCADextra Coaching is your primary source for academic resources and support for students at all SCAD locations. Our services are free of charge and can be found in the Blackboard Assist portal at https://scad.blackboard.com/ultra/integration/bbAssist.

## University Policies

**Academic Integrity**
Under all circumstances, students are expected to be honest in their dealings with faculty, administrative staff, and other students. For purposes of this policy, the term faculty or faculty member includes any person engaged by the university to act in a teaching capacity, regardless of the person's actual title. In speaking with members of the SCAD community, students must give an accurate representation of the facts at hand. Failure to do so is considered a breach of the Student Code of Conduct and may result in sanctions against the student, including suspension or dismissal.

In course assignments, students must submit work that fairly and accurately reflects their level of accomplishment. Any work that is not a product of the student's own efforts and is not original to the student is considered dishonest. Students must not engage in academic dishonesty; doing so can have serious consequences. Academic dishonesty includes, but is not limited to, the following:

1. Cheating, which includes, but is not limited to, a) the giving or receiving of any unauthorized assistance in producing assignments or taking quizzes, tests, or examinations; b) dependence on the aid of sources including technology beyond those authorized by the instructor in writing papers, preparing reports, solving problems, or carrying out other assignments; c) the acquisition, without permission, of tests or other academic material belonging to a member of the university faculty or staff; or d) the use of unauthorized assistance in the preparation of works of art.
2. Plagiarism, which includes, but is not limited to, the use, by paraphrase or direct quotation, of any published or unpublished work generated by any form of technology or another person without full and clear attribution of the source and authorized by the instructor. Plagiarism also includes the unacknowledged use of materials prepared by another person or agency engaged in the selling of term papers or other academic materials.
3. Submission of the same work in two or more courses without prior written approval of the professors of the courses involved.
4. Submission of any work not actually produced originally by the student submitting the work without full and clear written acknowledgment of the actual author or creator of the work.

To access the entire academic integrity policy and procedure, please visit SCAD / Compliance and policies / Academic integrity.

**Attendance and Personal Conduct:**
Students are expected to actively engage in courses to achieve the required learning outcomes. Absences in excess of 20% of the course (e.g., five absences for a 10-week course that meets twice per week) result in the student receiving a failing grade, unless the student withdraws from the course in accordance with the withdrawal policy. Absences due to late registration are included in the overall absences permitted for the course.

For **on-ground** courses, students are expected to attend and participate in all scheduled class sessions. Tardiness, early departure, or other time away from class in excess of 15 minutes per class session is considered an absence for that class session.

Students enrolled in **SCADnow** courses are required to check the online course site regularly and academically engage in the daily work of the course. Students earn attendance in SCADnow online courses through active participation in live class sessions and/or asynchronously by participating in academically related activities on a minimum of two separate days per unit/week.

To access the entire academic integrity policy and procedure, please visit SCAD / Compliance and policies / Attendance.

The student's appearance and conduct should be appropriate and should contribute to the academic and professional atmosphere of SCAD. The university reserves the right at its sole discretion to withdraw the privilege of enrollment from any student whose conduct is detrimental to the academic environment or to the well-being of other students, faculty or staff members, or to the university facilities.

**Enrollment policies:**
Students are responsible for assuring proper enrollment. See the SCAD catalog for information on add/drop, withdrawals, incompletes, and academic standing.

**Midterm Conference(s):**
Each student enrolled in the course will have a midterm conference scheduled outside of class time with the professor. Students are expected to keep this appointment.

**Access and Accommodations:**
Access and Accommodations through The Office of Disability Resources: SCAD is committed to providing an accessible and inclusive environment for all students. Students with established academic accommodations under the ADA from the Office of Disability Resources are encouraged to provide their letter of approved accommodations to faculty in classes in which they are enrolled as soon as possible, as only students who provide the letter are eligible to use their accommodations. Students who have not yet established services through The Office of Disability Resources and have a documented disability may require academic accommodations are encouraged to contact The Office of Disability

Resources as soon as possible since timely notice is needed to coordinate accommodations. The Office of Disability Resources staff will evaluate each request with required documentation, recommend reasonable accommodations, and prepare a letter of approved accommodations for students to provide to faculty dated in the current quarter in which the request is being made. Students are required to renew their accommodations each quarter through the SCAD Accommodate portal to receive their updated accommodations. Students may contact The Office of Disability Resources at disability@scad.edu or 912-525-6233.

**Course Evaluations:**

Course evaluations offer students a dedicated opportunity to provide constructive feedback on each of their courses. Student feedback gathered through course evaluations is essential to continuously improving the SCAD academic experience. Evaluations are available to students each quarter during Weeks 8, 9, and 10 through MySCAD. For additional information, contact evaluations@scad.edu.

**Student Surveys:**

SCAD strongly encourages students to provide feedback on their university experience through institutional surveys. The SCAD Student Survey and the Ruffalo Noel Levitz Student Satisfaction Inventory are administered to students across locations each spring. The National Survey of Student Engagement is administered biennially in winter. Following survey administration, SCAD's institutional effectiveness department analyzes and reports results to various SCAD departments to inform data-driven enhancements. For additional information, contact surveys@scad.edu.
