

Assignment 2 - reactive sandbox (3 weeks)

ex: spotify

- browser: song list
- detail: now playing
- controller: queue / shuffle

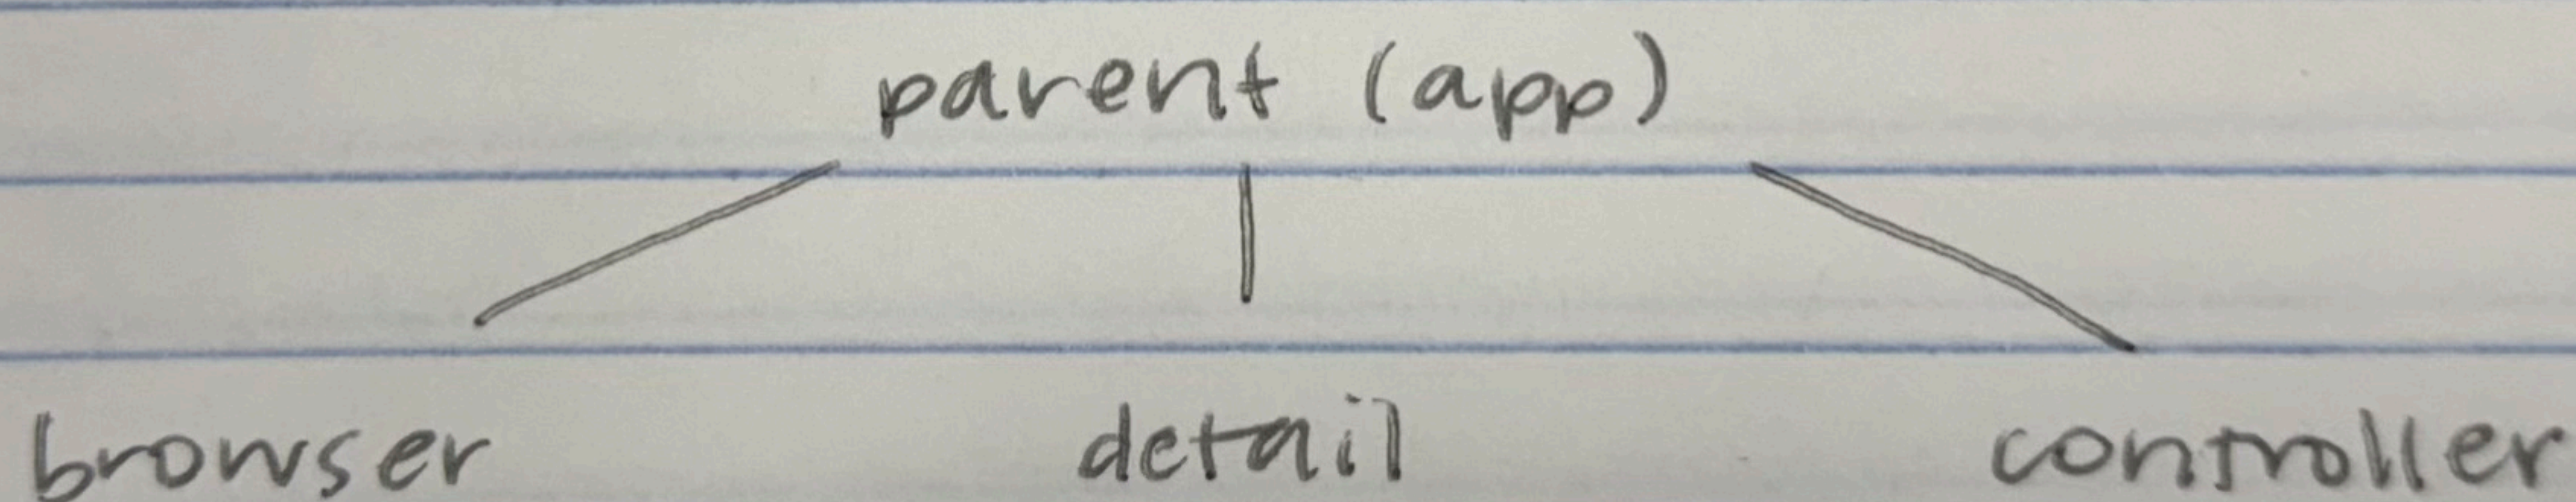

ideas: * needs to solve a problem *

notion import syllabus / assignment info?

browser: explore the collection, reads & writes

detail: show selected item, reads only

controller: takes action, reads & writes

vocab:

Single source of truth: for every piece of data, exactly one component "owns" it. every other component that needs it gets a copy via props. this prevents contradictions & makes your system predictable
